

Meet Tee-Mo. The Sovereign Team Brain.

Secure, Slack-native collaborative AI
for the modern workspace.

The Single-Player Bottleneck

Requires users to leave the team environment. Sensitive company data is copy-pasted into isolated browser tabs. Context is instantly lost; collaboration is impossible.

The Multiplayer Workspace

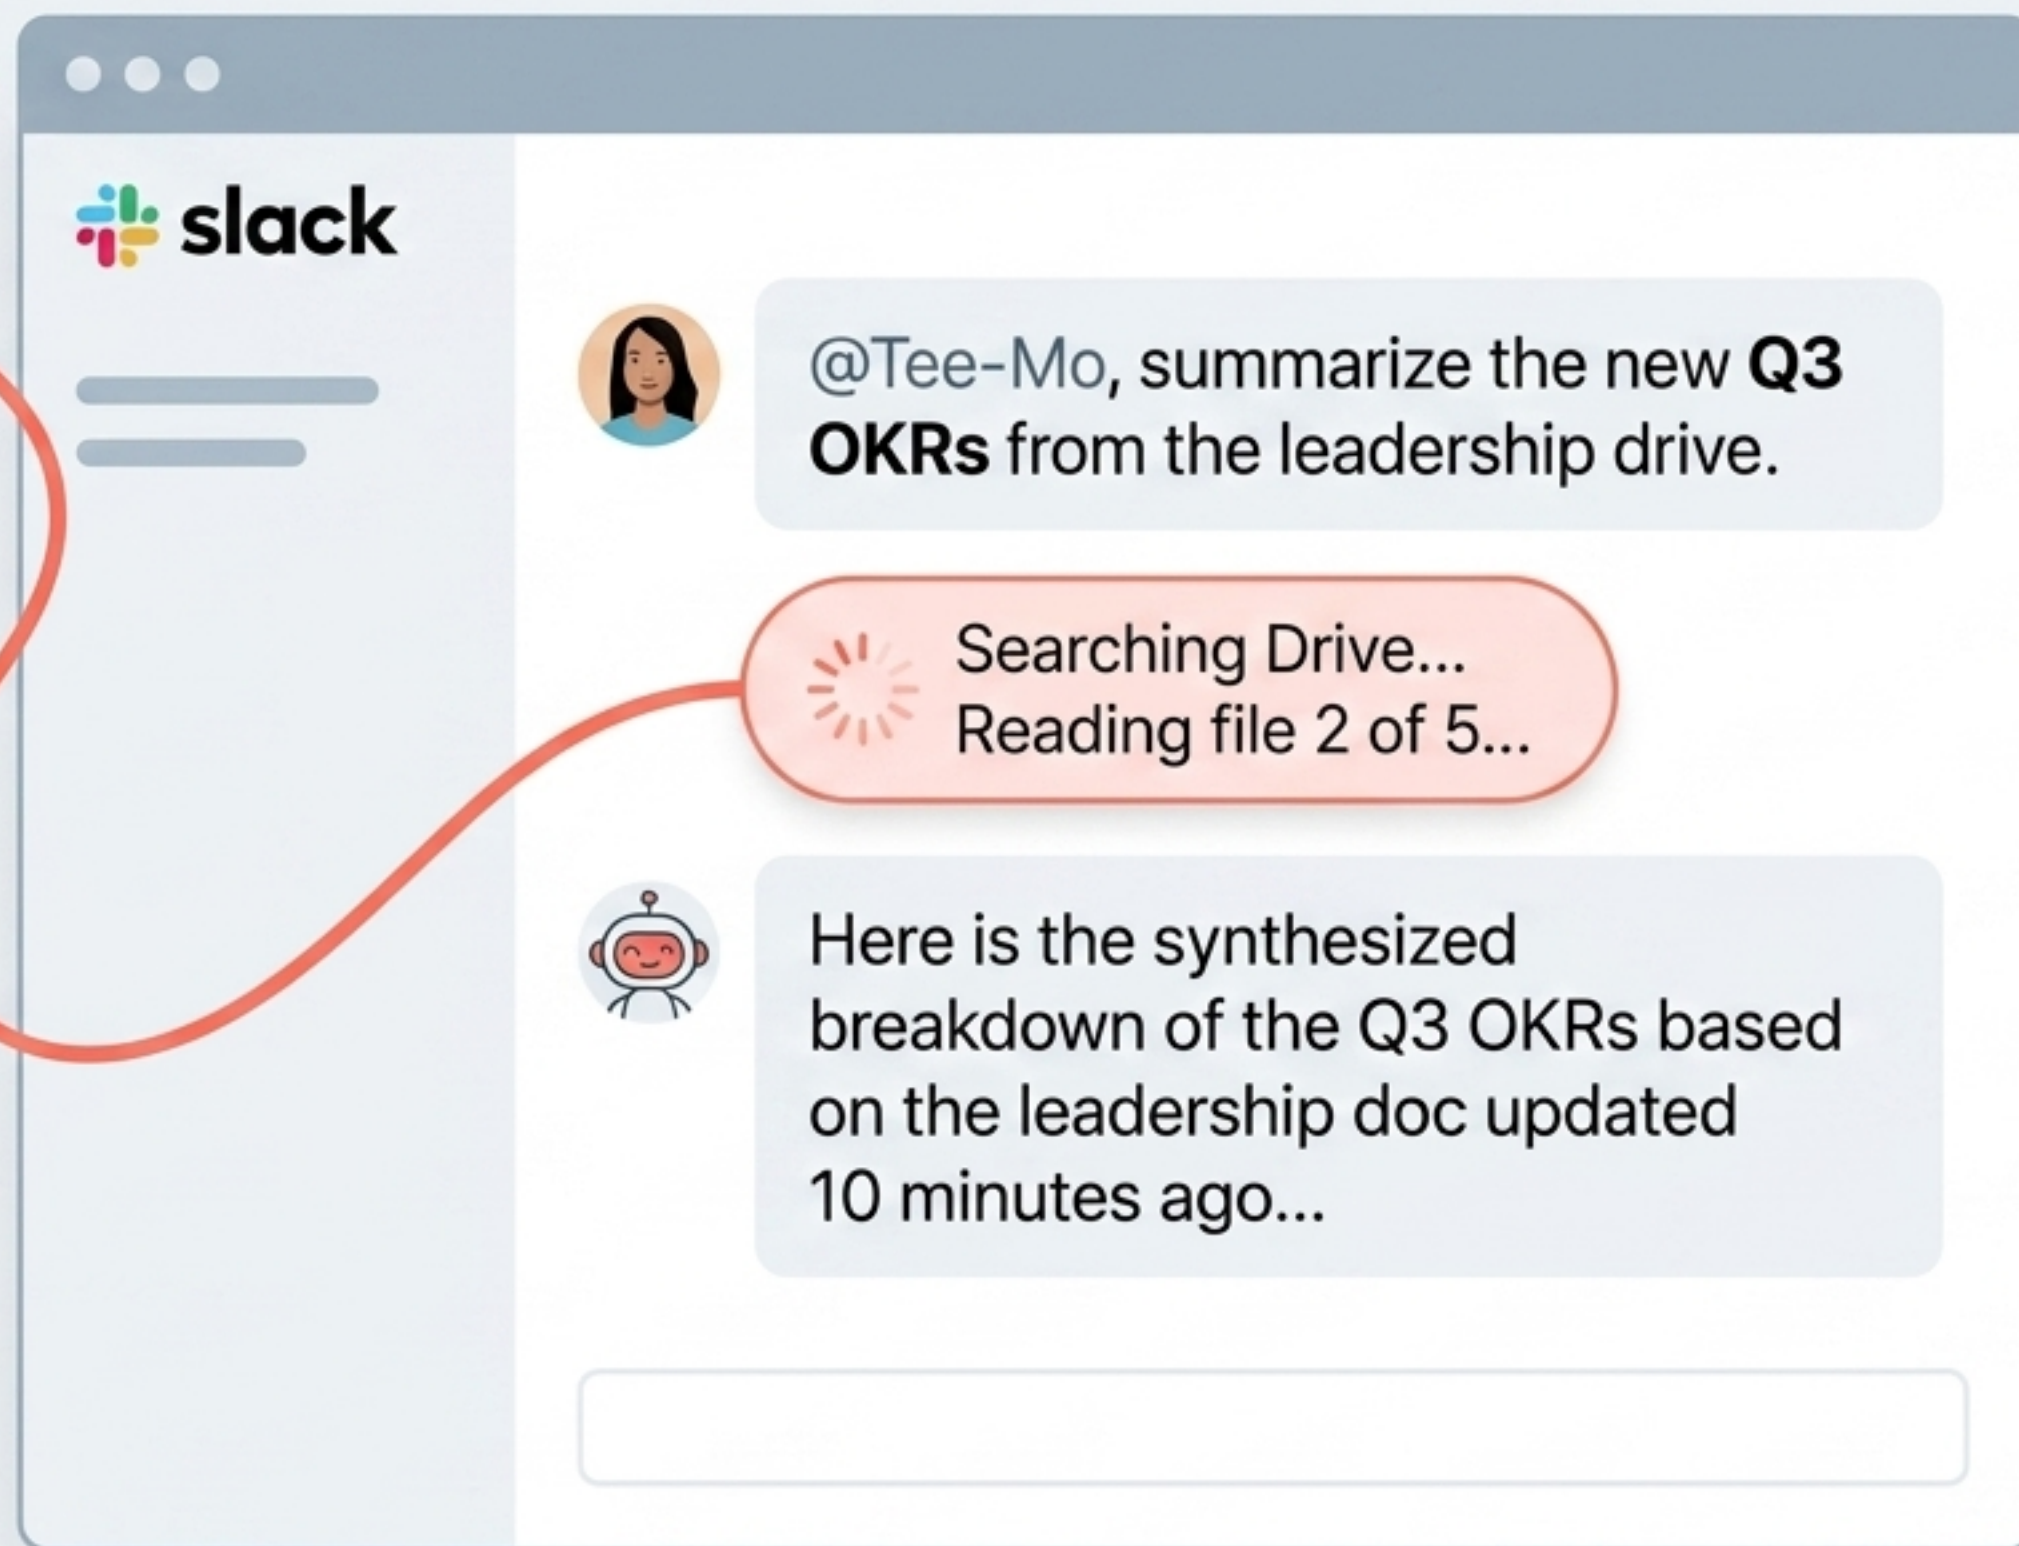

AI lives directly inside your Slack channels. Data stays securely in your cloud. The entire team shares, refines, and acts on the same context in real-time.

Zero-Friction Knowledge.

Tee-Mo reads local uploads and Google Drive files mesks fresh, on-demand. No stale caches.

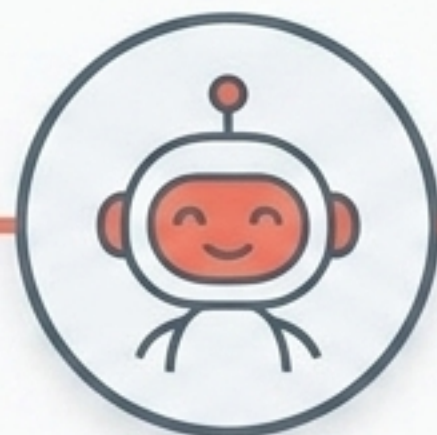

@Tee-Mo, list open PRs for the frontend repo and draft a Jira ticket for the auth bug.

The Woven Thread

1 Trigger

User asks in channel.

2 Discovery

Tee-Mo instantly scans connected integrations (Model Context Protocol).

3 Action

Tee-Mo securely queries GitHub and creates the Jira ticket, reporting back in the thread.

Beyond Chat. Seamlessly trigger external workspace tools without writing fragile API scripts.

Add Automation

Schedule

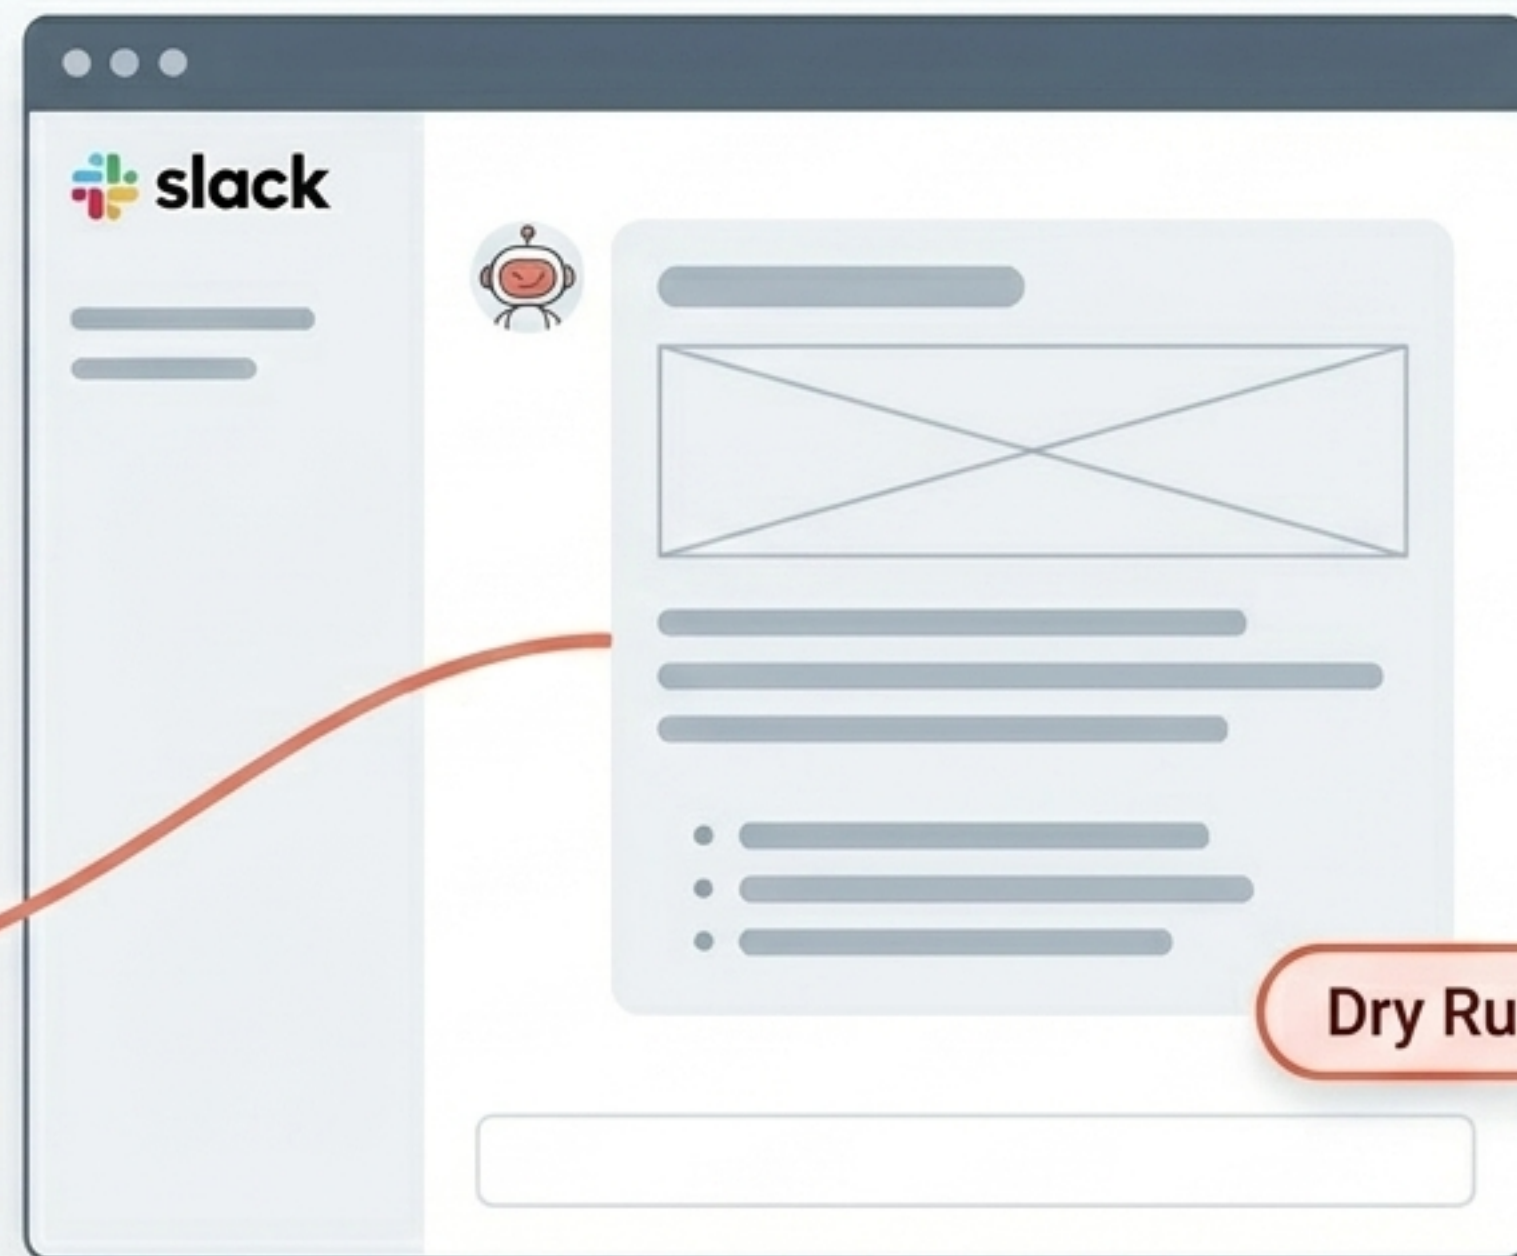

🕒 Every Monday at 9:00 AM

Prompt

Post a summary of new Drive files into #standup.

Target

#standup

Proactive Multiplier. Move from **reactive** queries to **scheduled, background intelligence**.

Read

Instant Understanding

- Deep context from Google Drive and local files.
- Auto-generated, self-healing file catalogs.

Act

External Execution

- Trigger external tools natively via MCP.
- Build automated synthesis pages (Karpathy Parity) directly in the workspace wiki.

Automate

Scheduled Delivery

- Background cron tasks delivered straight to Slack.
- Rich execution history and safe dry-run previews.

The Industry Standard (RAG)

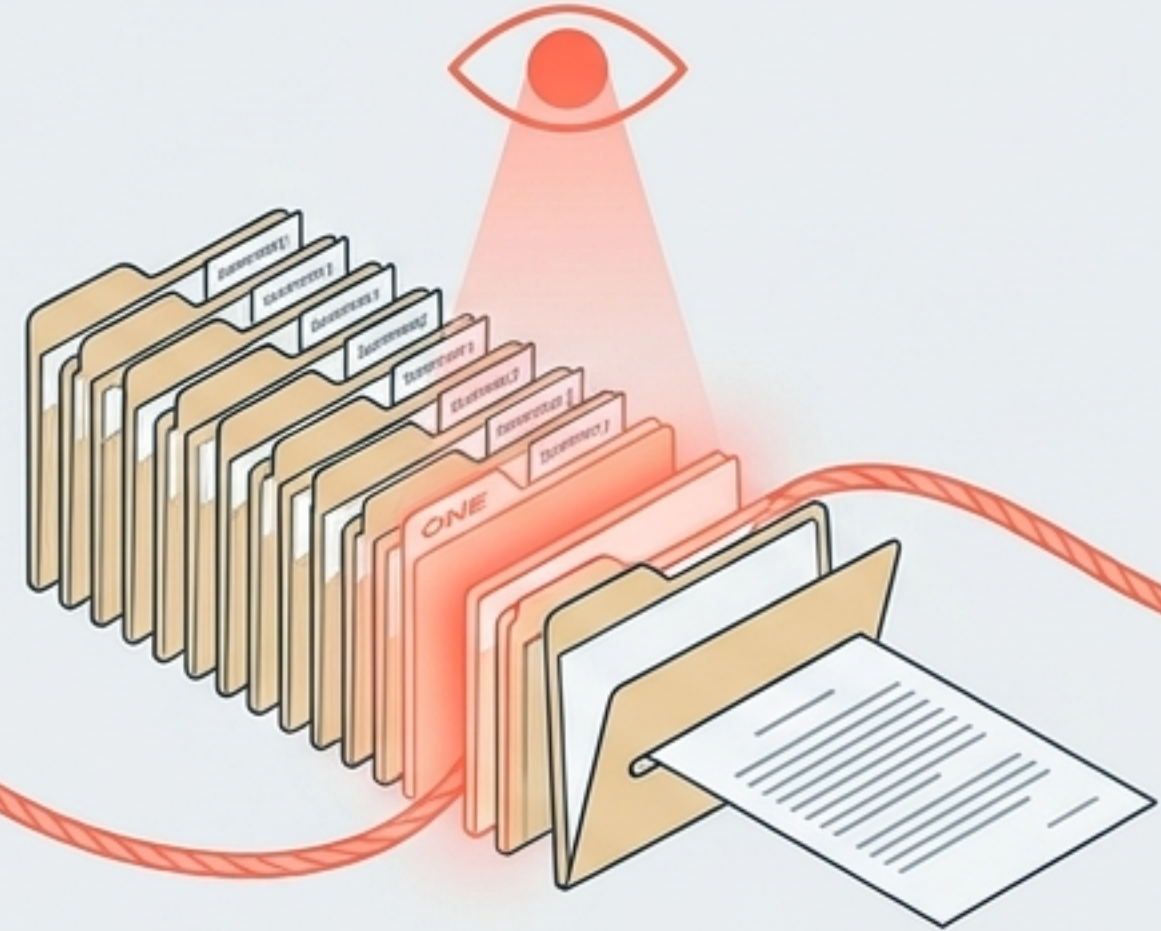

The Shredder

Shreds documents into isolated chunks. Often retrieves mismatched paragraphs, causing AI hallucinations and relying on stale, out-of-sync databases.

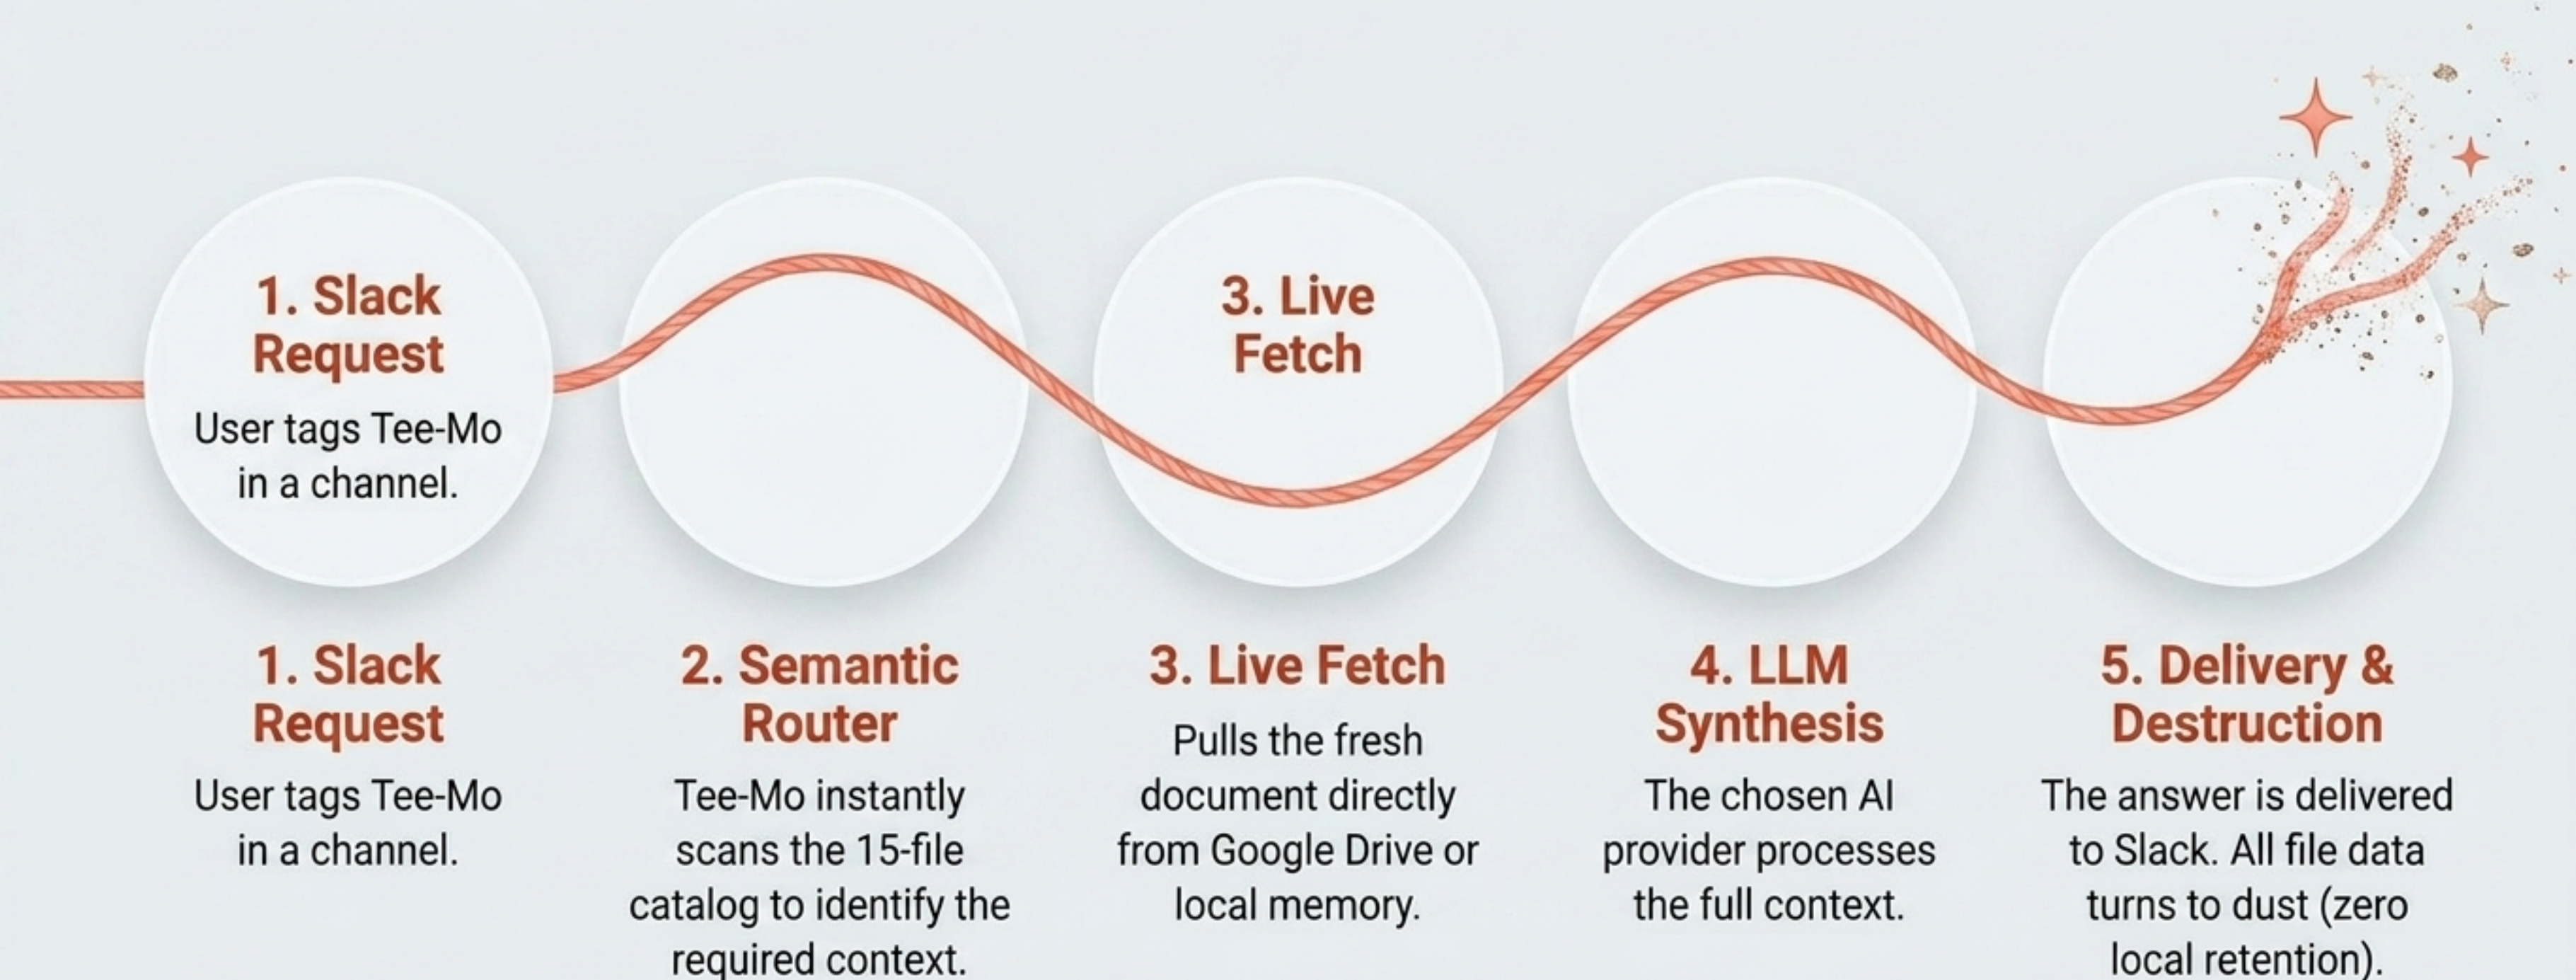

The Tee-Mo Way (Semantic Routing)

The Librarian

Reads AI-generated catalogs of your 15 most critical files. Selects the right document and reads it entirely fresh, on-demand. Perfect accuracy, zero staleness.

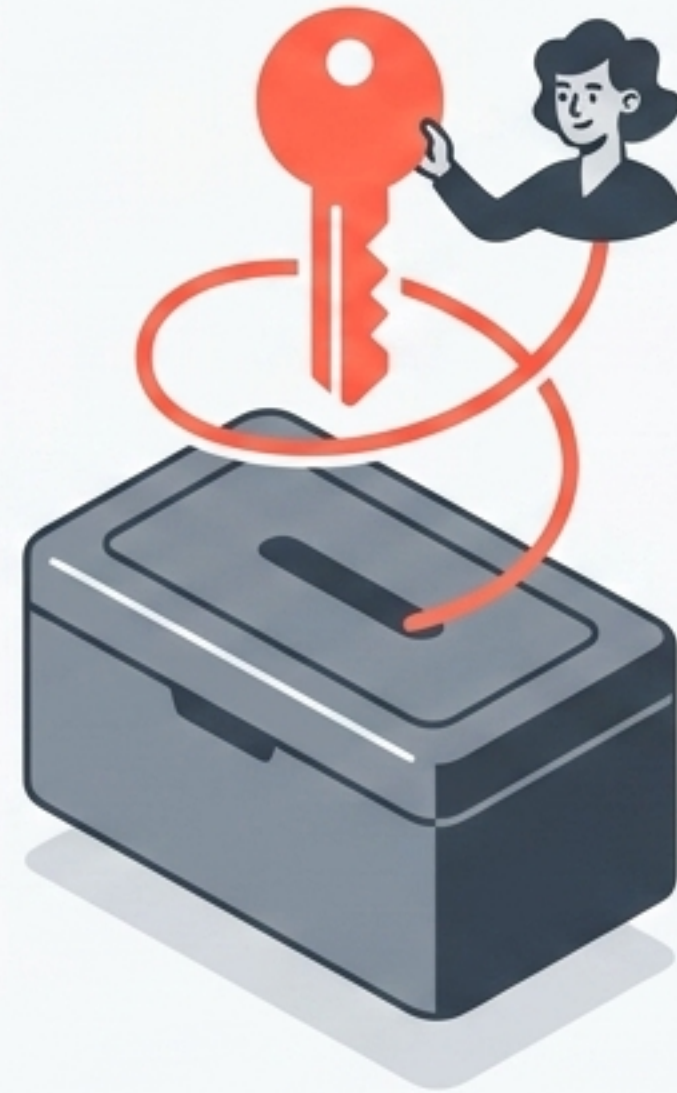

Life of a Query

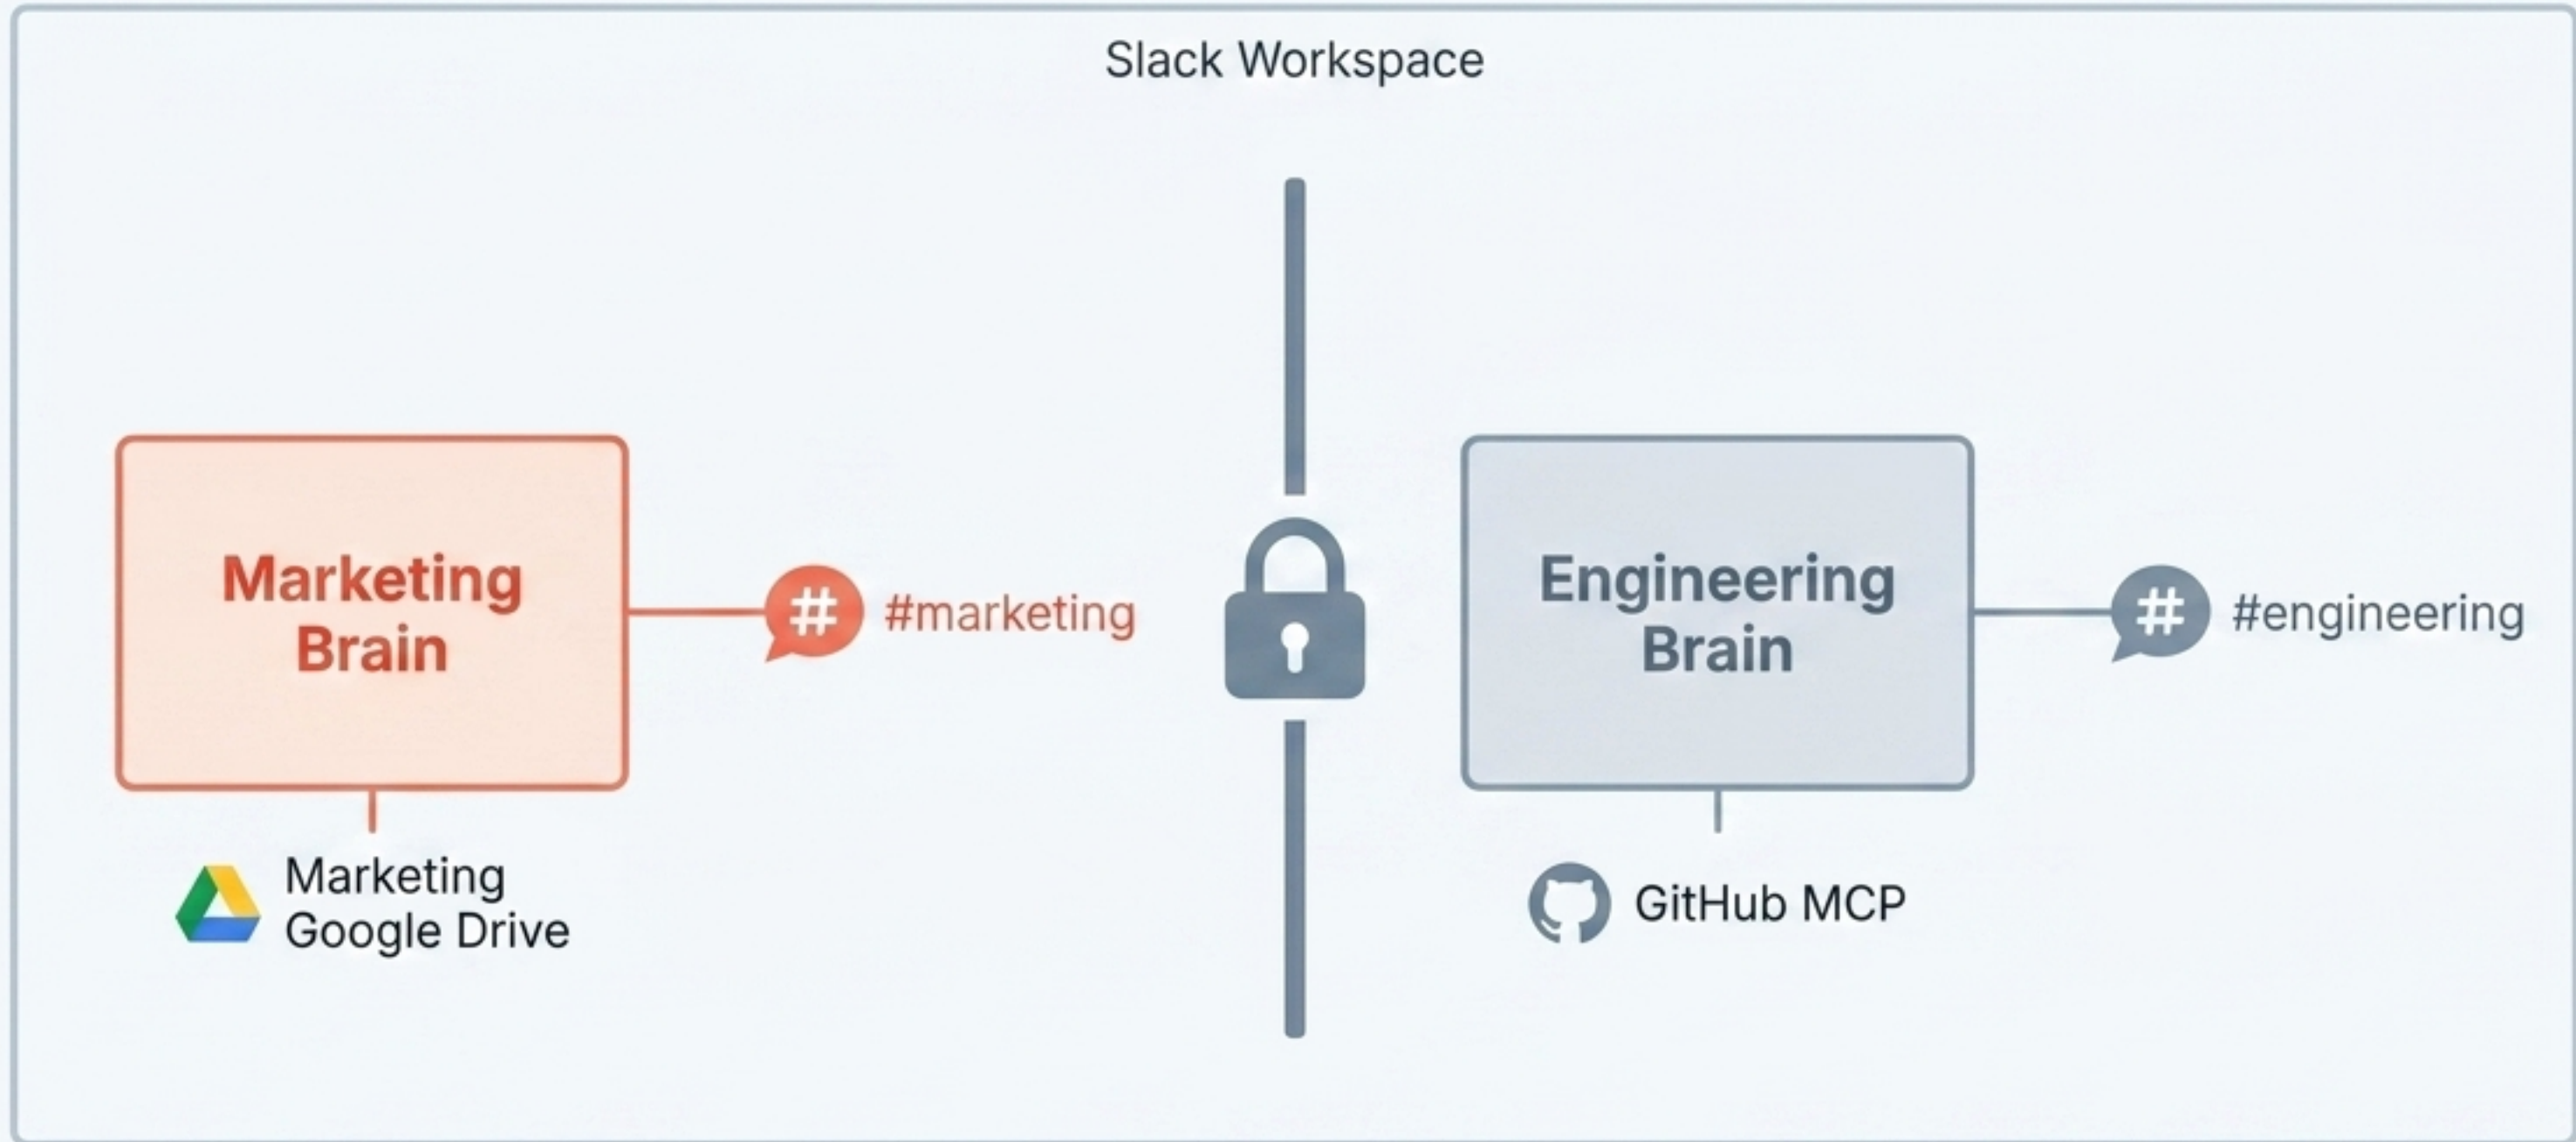

The Foundation of Trust: Bring Your Own Key (BYOK)

Your Key, Your Control: You hold the API keys. Tee-Mo acts purely as the engine.

Enterprise Encryption: Every Slack bot token, API key, and Drive credential is encrypted at rest using AES-256-GCM.

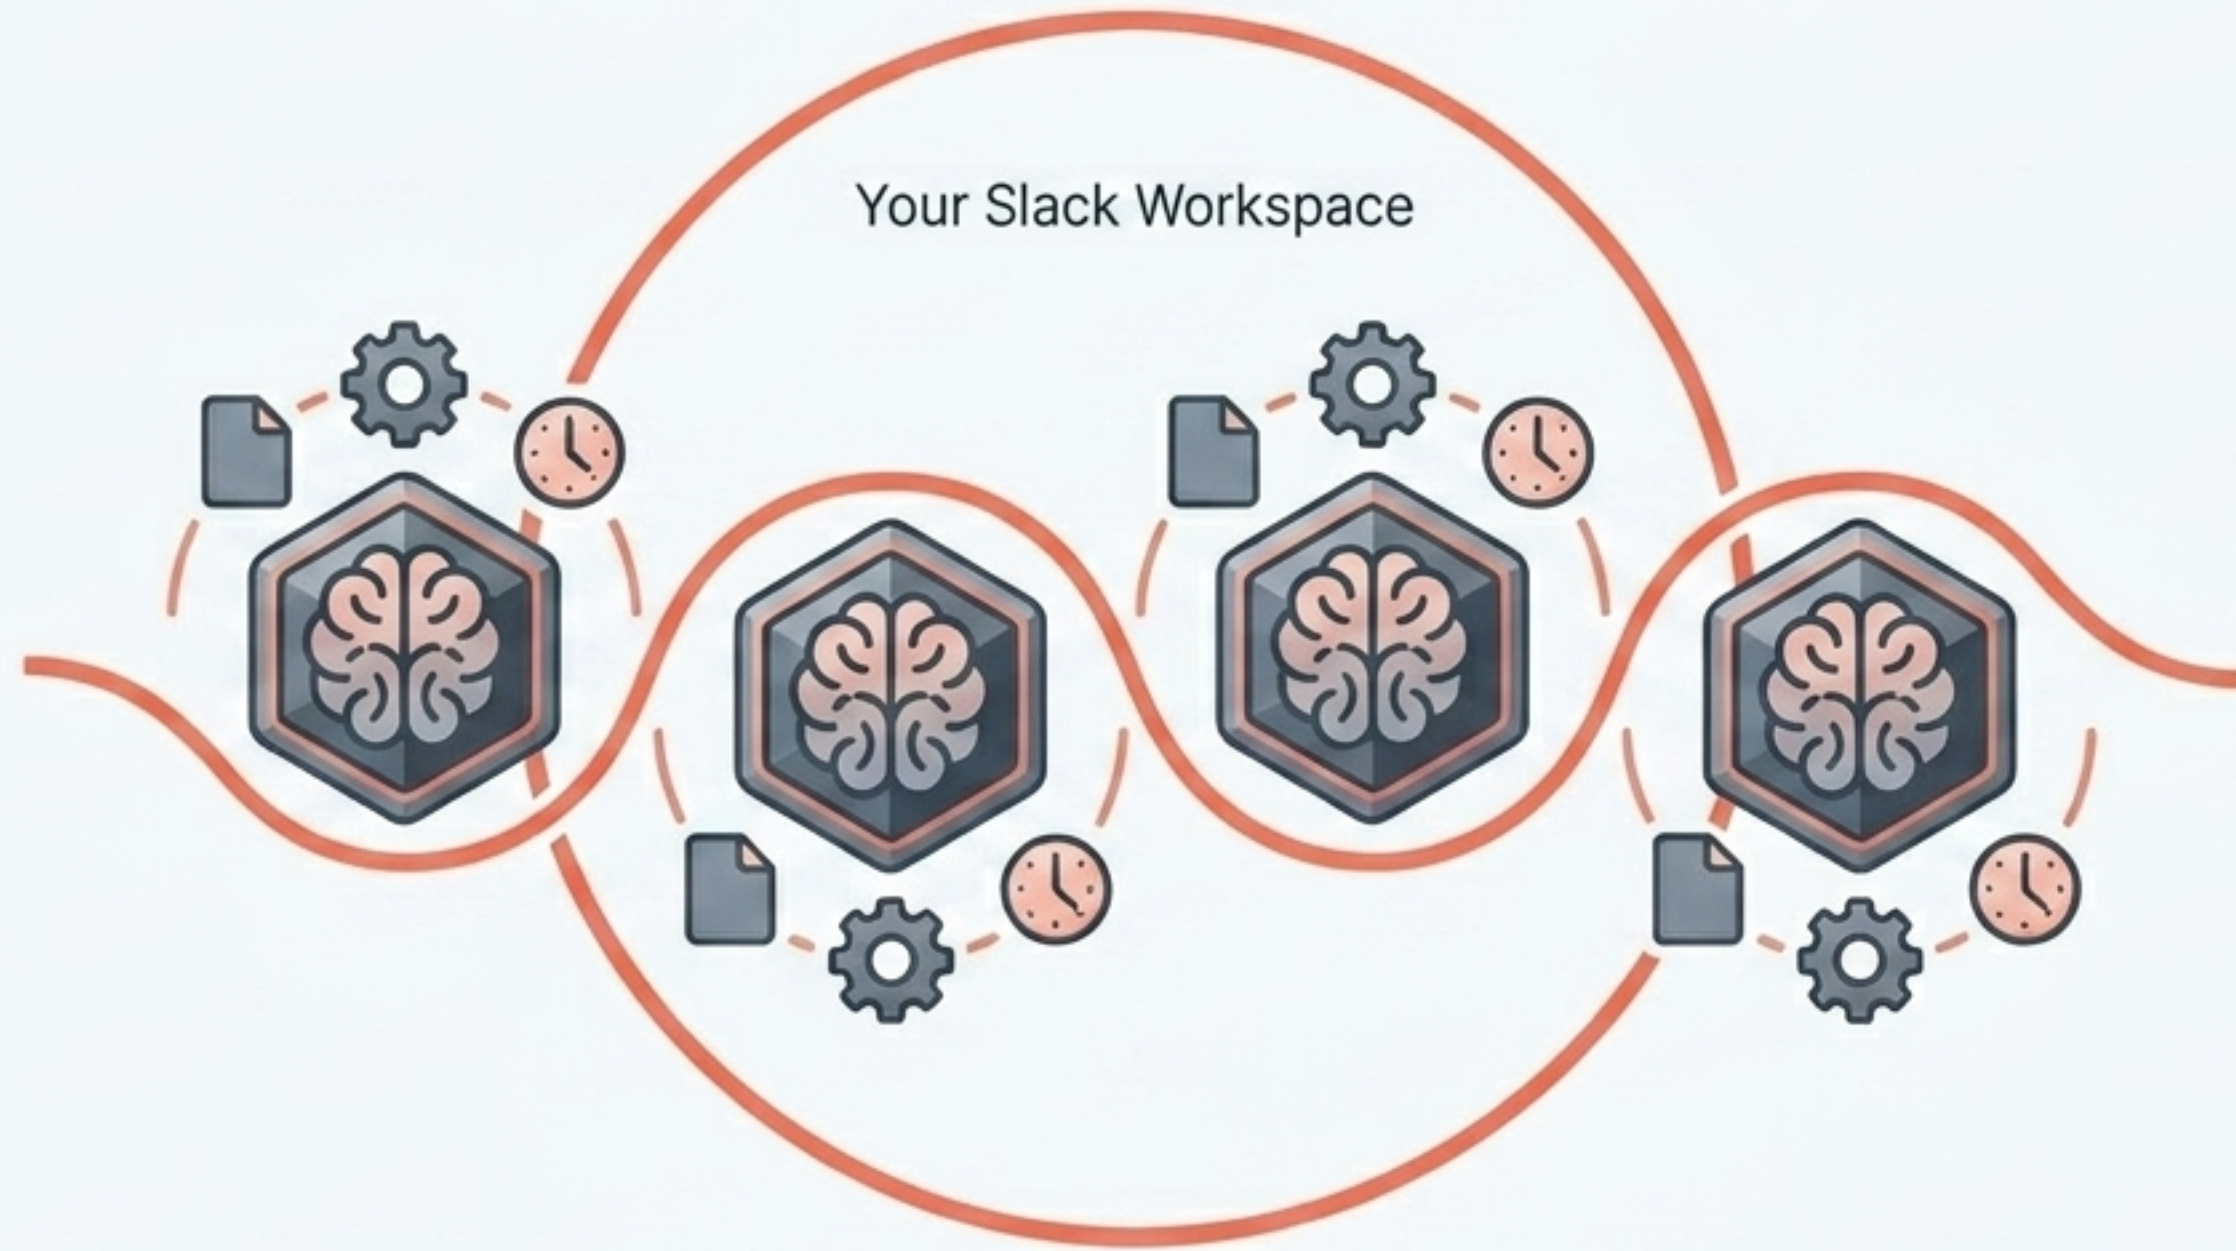

Zero In-Process State: No caches. No persistent file storage. The moment your Slack message is delivered, the memory is securely wiped.

Physical isolation at the channel level. The Engineering bot physically cannot access Marketing's knowledge files, ensuring strict departmental privacy without complex permission matrices.

The Sovereign Team Brain

- Tee-Mo isn't just a single chatbot. It is a fleet of highly specialized, context-isolated assistants.
- Each channel gets its own dedicated brain, wired directly to its specific documents, tools, and scheduled automations.
- Secure, multiplayer, and perfectly aligned with how your teams actually work.

**Not a destination. The connective
tissue of your workspace.**

Turn fragmented knowledge and isolated tasks into a unified, collaborative multiplier.
